Bamboo Pit Viper

## First aid

Do IT

R.I.G.H.T

R

Reassure the patient, 70% of snake bites are from non-venomous species & 50% of bites by venomous species actually inject venom.

I

Immobilized as in case of fracture without compression

GH

Get to hospital fast

T

Tell the doctor of any symptoms such as drooping eyelids that manifests on the way to hospital & time of bite .

## What not to do

Do not eat or drink anything unless okayed by medical sources

Do not engage in any physical activity

Do not apply oral suction to bite

Do not cut or incise bite mark with blade

Do not wash the wound

Do not apply either hot or cold packs

Do not waste time or take any risks trying to kill, bag or bring in offending snake

Bite patterns – not dependable

Nonvenomous

Venomous

## Anti snake venom serum

The only treatment available for venomous snake bites is **ASVS, anti snake venom serum**, it is a polyvalent, useful against Cobra, Krait, Russell's viper and Saw scaled viper, which are the common venomous snakes in India

This has to be administered I V and there are chances of anaphylactic shock, therefore it can be administered only under medical supervision

## Prevention

- **Even though most snakes are not venomous, avoid picking up or playing with any snake unless you have been properly trained.**
- **When handling venomous snakes always keep your eye on snakes**
- **Do not thrust hands or feet into any areas if you cannot see into the area.**
- **Always use equipment available to you, do not try to outsmart the snake.**

**This is for  
those who go  
out in the  
nature**

- **Never hike, camp, work or collect specimens in areas where there are venomous snakes unless accompanied by at least two companions. One to stay with the victim and the other to go get help. All parties should know what to do.**
- **If you come across any snake in the field and don't know positively what it is or isn't, do not approach it, try and examine it or photograph it (unless you have a long telephoto or zoom lens). Move away from it as expediently as possible.**

**This is for  
those who go  
out in the  
nature**

- **If you work with venomous snakes in a public (zoo/ exhibit) or private collection or in a museum or university laboratory, never open their cage without a companion nearby who is familiar with snakebite first-aid**
- **Never handle or attempt to handle venomous snakes without at least one trained companion present**
- **If you are not an experienced venomous snake handler, don't try handling or catching them without first obtaining extensive experience and training by someone who is trained**

Reptile Rescue & Study Centre

A close-up photograph of a snake's head and upper body, resting on a thin, light-colored branch. The snake's scales are a mix of brown and tan, and its eyes are visible. The background is slightly blurred, showing more of the branch and some green foliage.
